INTRODUCTION

This report presents final figures on the area of field crops sown for harvest in 1961 as reported in the 1961 Census of Agriculture. The enumerators were instructed to include all crops for harvest in 1961, whether planted at the date of the Census, June 1, or intended to be planted for harvest that year.

The acreages given in this report are for **all farms** as defined in the Census. Data for commercial farms (defined as farms with sales of agricultural products during the previous 12 months of \$1,200 or more) will be tabulated and published later.

In the 1961 Census, a farm was defined as a holding of 1 acre or more with sales of agricultural products during the past 12 months valued at \$50 or more. This definition differs from that used in the 1951 and 1956 Censuses, but the change had very little effect on field crop acreages.

In certain sections of the Province of Quebec, the land measure is the arpent and enumerators reported crop areas in this unit. The conversion to acres was made by the Dominion Bureau of Statistics, using the factor, 1,000 arpents equal 845 acres.

Symbols used:

(-) means "nil"

(--) means "less than one acre"

Le présent rapport donne les chiffres définitifs du recensement de l'agriculture sur la superficie des grandes cultures semées et récoltées en 1961. Les agents recenseurs devaient compter toutes les cultures à récolter en 1961 qui étaient déjà semées à la date du recensement (1er juin) ou qui devaient l'être pour être récoltées en 1961.

Les superficies indiquées dans le rapport sont celles de **toutes les fermes** au sens du recensement. Les chiffres des fermes commerciales (fermes dont les ventes de produits agricoles durant les douze derniers mois ont atteint \$1,200 ou plus) seront totalisés et publiés plus tard.

Au recensement de 1961, une ferme était une exploitation de 1 acre ou plus qui avait vendu au cours des 12 derniers mois pour \$50 ou plus de produits agricoles. Cette définition diffère de celle des recensements de 1951 et de 1956, mais les superficies des grandes cultures ne s'en sont presque pas ressenties.

Dans certaines régions du Québec, la mesure agraire est l'arpent et les agents recenseurs ont inscrit les superficies en utilisant cette mesure. La conversion en acres a été effectuée par le Bureau fédéral de la statistique qui a utilisé le facteur: 1,000 arpents = 845 acres.

Signes conventionnels:

(-) néant

(--) moins d'une acre
